# SHOWY "SELECT" DAHLIAS

POMPON DAHLIAS

Few flowers return so much for the amount of money and time expended as Dahlias. They are easy to grow, prolific bloomers, and offer infinite variety of color and form. We are offering only selected tubers, so you will be assured a good start. On the other side of this folder are listed numerous varieties and combination offers. Be sure to read the entire list and then pick out your favorites.

## HOW TO GROW DAHLIAS—

Almost any soil will grow dahlias if it is made porous and drainage is good. The heavier the soil, the less watering will be necessary, but the clumps will have to be taken up earlier to avoid rotting. Fertilizing should be done a month or more before planting, to avoid contact with fresh fertilizer when planting. Side dressings of complete fertilizers may be applied during the growing time, but be careful of straight nitrogen because of burning.

Large varieties should be planted in beds by themselves, allowing at least three feet between each plant. From March until the middle of June is the usual planting time for Southern California. Drive stakes at the time of planting so as not to disturb the tuber or root system.

When watering, do a thorough job, so penetration is deep. Do not sprinkle the ground and expect to get healthy growth. Cultivate only to keep weeds down and soil friable. Water only when ground is drying. Dahlias do not like wet feet.

To control pests, an all-purpose spray or dust is recommended. Practice regular pest control so as not to have damage first and then start to fight the cause. Occasional sprinkling with the garden hose will help against red spider, and the all-purpose insecticides control aphids, leaf-hoppers and mildew.

Pompon and medium varieties may be planted in the flower border and are usually not disbudded. Larger types should be disbudded to gain the finest specimens. Unless you are experienced, it is best to wait until each tuber develops a shoot from the eye before separating. Be sure to have at least one eye on each tuber.
